The Reilley and Husted sites are situated in the northern American Bottom uplands in the Vaughn Branch Upland Locality about 500 meters east of the Mississippi River floodplain. Husted is about 300 meters downslope from Reilley. The two settlements really form a contemporaneous single-settlement complex. Both sites appear to have been occupied by the same people, but utilized for different purposes. The Reilley site yielded 491 prehistoric features, including five structures, all dating to the Late Woodland, early Sponemann phase, circa cal A.D. 650–750. Only a portion of this site actually fell within the FAP-310 ROW. The smaller Husted site contained 110 features, including two houses, and again all of the features are associated with the early Sponemann phase. The entire occupation fell within the ROW.

Both sites are unique in that they occur during the early Sponemann phase when the Sponemann identity was being forged in the northern American Bottom. This new identity occurred as a result of interaction between the local Patrick culture and outside migrants from the more northerly Mississippi River Valley, i.e., most probably people associated with the Fall Creek phase in the Sny Bottom. This occurred at the same time as the introduction of the bow and arrow. At Reilley over one hundred arrow points, including 17 Jack's Reef cluster types were recovered. A smaller number of arrow points were also recovered from the Husted site. Arrow points do not occur in the preceding Initial Late Woodland period, but were introduced at the same time as the Reilley/Husted complex.

Reilley appears to represent a large multi-season procurement camp as evidenced by subsistence activities primarily focused on deer hunting and nut harvesting and processing. Husted, on the other hand, has a more limited subsistence focus, but produced a number of clay zoomorphic and anthropomorphic figurines that are not commonly found at other Sponemann sites in this region. A number of the human figurines appear to have been purposively broken. This occupation appears to have been a special purpose encampment, perhaps related to propitiation, to gain favor for future hunting and/or harvesting ventures or thanks for successful hunts or harvests. Another possibility is that this complex served as a gathering point for two cultural entities that came together to commemorate the creation of the new Sponemann identity. Perhaps a communal hunting venture(s) associated with the new bow and arrow technology was the primary catalyst that drove the creation of this unique economic/ritual complex, a complex that has not heretofore been documented in the Midwest during this time period.

3.3.	Lip Decoration Orientation.....	41
3.4.	Lip Decoration Location .....	41
3.5.	Cord-Wrapped-Stick Impressions: Correlation Between the Number of Cords and Their Thickness .....	43
4.1.	Lithic Assemblage Statistics.....	84
4.2.	Late Woodland Dart Points .....	65
4.3.	Late Woodland Arrow Points and Dupo Knives .....	65
4.4.	Curated Pre-Late Woodland Projectile Points .....	66
4.5.	Unidentified Projectile Point and Point Fragments .....	66
4.6.	Bifacial Drills.....	75
4.7.	Woodworking Tools .....	77
4.8.	Polished Flakes and Informal Tools Made from Polished Flakes .....	77
4.9.	Unhafted Bifaces .....	78
4.10.	Formal Unifaces.....	79-80
4.11.	Reilley Blades and Likely Blades .....	81
4.12.	Likely Functions of Informal Tools from Reilley Features .....	82
4.13.	Feature Core Summary.....	82
4.14.	Feature Debitage Summary .....	83-84
4.15.	Ground Stone .....	85
4.16.	Cobble Tools .....	88
4.17.	Minerals Recovered—All Contexts .....	90
4.18.	Feature-Derived Minerals.....	90
4.19.	Feature Assemblage Material Composition by Weight.....	90
4.20.	Frequency of Selected Tool Categories by Raw Material from Features .....	91
4.21.	Raw Material of Feature Cores and Debitage by Weight.....	91
4.22.	Excavation Block 2:Excavation Block 5 Tool Frequency Ratios .....	94
5.1.	Summary of Identified Wood .....	97
5.2.	Summary of Identified Nutshell.....	98
5.3.	Summary of Identified Seeds.....	99
5.4.	<i>Iva annua</i> and <i>Helianthus annuus</i> Morphometric Data .....	101
5.5.	Summary of Miscellaneous Botanical Remains .....	102
6.1.	Faunal Remains .....	108-109
6.2.	Deer Food Utility Indices and Body Part Representation .....	110
6.3.	Butchery and Processing Marks .....	114
6.4.	Modified Bone.....	115-118
6.5.	Distribution of Faunal Remains by Occupation Area .....	119-120
6.6.	Distribution of Fauna by Feature Cluster, Western Occupation Area.....	121-124
6.7.	Proportion of Vertebrate NISP by Faunal Group .....	126
6.8.	Percent Vertebrate NISP by Faunal Group at Select Late Woodland Sites .....	127
6.9.	Deer Food Utility Index (FUI) Values for Select Patrick and Sponemann Phase Sites .....	128
6.10.	Fish Representation by Family (% NISP) at Select Patrick and Sponemann Phase Sites .....	129

*Book Notes*

---

*A Late Woodland Procurement and Ceremonial Complex at the  
Reiley and Husted Sites in the Northern American Bottom*

---

<b>8.1.</b>	Radiocarbon Dates .....	135
<b>11.1.</b>	Pit Distribution by Cluster .....	162
<b>11.2.</b>	Structure Attributes .....	164
<b>11.3.</b>	Summary of All Pit Attributes .....	167
<b>12.1.</b>	Body Sherds by Temper .....	174
<b>12.2.</b>	Vessel Types .....	176
<b>12.3.</b>	Vessel Characteristics.....	177
<b>12.4.</b>	Lip Decoration Orientation.....	185
<b>12.5.</b>	Lip Decoration Location .....	185
<b>12.6.</b>	Figurine Types.....	194
<b>12.7.</b>	Figurine Characteristics.....	195-196
<b>13.1.</b>	Chert Woodworking Tools .....	214
<b>13.2.</b>	Attributes of Drills and Borer.....	216
<b>13.3.</b>	Summary of Informal Tools.....	217
<b>13.4.</b>	Core Summary .....	218
<b>13.5.</b>	Debitage Summary .....	219
<b>13.6.</b>	Chert Assemblage Raw Material Composition.....	220
<b>13.7.</b>	Attributes of Ground Stone Tools.....	222
<b>13.8.</b>	Fire-Cracked Rock Totals.....	224
<b>13.9.</b>	Mineral Totals.....	225
<b>14.1.</b>	Wood Summary .....	231
<b>14.2.</b>	Nut Summary .....	231
<b>14.3.</b>	Seed Summary .....	232
<b>15.1.</b>	Husted Faunal Remains .....	236
<b>15.2.</b>	Husted Faunal Remains by Feature and Major Taxon .....	237
<b>16.1.</b>	Radiocarbon Dates .....	239
